

Detroit-headquartered Facilities Management Firm Wins Major Contract with Dayton Power and Light

June 18, 2009, Detroit, Mich. -- Today officials of Detroit-headquartered facilities management and maintenance services company Powerlink announced the award of a major contract with Ohio-based Dayton Power and Light (DPL) to provide maintenance and upkeep of its utility service sites throughout the western region of the state of Ohio.

This three-year contract, with an option for a one-year extension, will give PL responsibility of property management for more than 15 offices and 80 substation and microwave locations spanning DPL's nine county service area.

"We are absolutely delighted to have the opportunity to deliver our customer service driven solutions to DPL and their customers," said Link Howard, III, president and CEO of Powerlink. "This partnership serves as evidence of our proven facilities management solutions, while opening up an emerging market for our growing company."

For the next three years PL will work with DPL to assist in the utility company's efforts to enhance and upgrade its facilities and infrastructure to better meet the needs of its customers. PL officials cited their "value proposition," including the delivery of superior technology, service, people and process, as the determining factor in being awarded this opportunity.

"The combination of strong project management, plus our sophisticated system of technology-based management was the perfect fit for DPL's values and laser-focus on its customers," added Howard.

About DPL

Since its formation in 1911, The Dayton Power and Light Company (DP&L) has been a proud partner with Dayton and its surrounding communities. The parent of DP&L is Dayton-headquartered DPL Inc., a regional energy company and one of the city's largest corporate citizens with more than \$4 billion in assets.

Today, our 1,500 employees deliver electricity to more than 500,000 customers in a 6,000-square-mile area of west central Ohio. DPL generates electricity at 10 power plants, mainly located along the Ohio River, and has approximately 3,750 megawatts of total generating capacity.
